

Advantage Volume Waves Discover the Hidden Market Structure

Description

Analyze market structure and chart patterns using price swings, find supports and resistances at the latest pivot points, and identify the accumulation and distribution areas to find trading opportunities. Advantage Volume Waves makes complex price and volume structures simple and easy to understand. It shows the dominant trend and helps to recognize turning points based on the volume flow, so you can trade in the direction of the main market movement and be prepared for its reversal. You can use cumulative volume waves to find Richard D. Wyckoff and David H. Weis accumulation and distribution areas or use Fibonacci retracements to identify the end of corrections. The Advantage Volume Waves indicator removes the noise from the charts to make price and volume fluctuations much clearer and more readable.

Advantage Volume Waves - Indicator Settings

Input	Value	Description
Mode_ATR#1_Percent#2	1-2 default: 1	ATR or Percentage swings
Swing_Size	0-100 default: 3	Size of the swings
Type_Swings#1_SupRes#2_Trend#3_CumVol#4	0-4 default: 4	Type of displayed indicator
Display_Options for 0	0-1 default: 1	0 - no labels; 1 - price labels
Display_Options for Type: Swings#1	0-6 default: 1	0 - no labels; 1 - price labels; 2 - swing reversal level; 3 - price labels and swing reversal level; 4 - CumVol labels
Display_Options for Type: SupRes#2	0-6 default: 1	0 - no labels; 1 - price labels; 2 - Fibonacci retracements; 3 - price labels and Fibonacci retracements; 4 - CumVol labels
Display_Options for Type: Trend#3	1-2 default: 1	1 - High/Low breakthrough; 2 - Close breakthrough
Display_Options for Type: CumVol#4	1-6 default: 1	1 - Volume; 2 - Ticks; 3 - Volatility; 4 - Volume labels; 5 - Ticks labels; 6 - Volatility labels

Important notice: Swing size should be greater than the size of a single bar to ensure proper display of the study. In order to display smaller swings, the chart should be switched to a smaller time frame.

How Advantage Volume Waves works

When the price changes direction, the indicator assumes that a new swing may appear. However, if the swing size criterion is not met, and the price returns to the previous direction, the swing line and cumulative volume return to the previous direction and color.

On the internet it is possible to find indicators that show only the correct swings and the cumulative volume without changing it and returning to the previous one even if a new swing has not been created. However, they have to take a price data from the future to draw right swings at the very beginning. They look great when backtested on historical data, but fail in real-time when they are unable to take data from the future.

Repainting lines and colors when the new swing criterion is not met is correct behavior and cannot be avoided unless looking into the future. This is not perfect, but it is unavoidable. If the swing is confirmed, the indicator line sticks to high or low, in unconfirmed swing it sticks to the close so it is easy to distinguish whether the swing is confirmed or not.

1. New bottom

2. Rebound but new swing criterion not met

3. Return to previous direction

Beta version: We are still working on Advantage Volume Waves. It is fully functional, but now it is an analytical tool rather than a real-time trading one as in short time frame like second or tick charts, it may not work properly. Just try it for free and consider if it meets your requirements.

We are still working on Advantage Volume Waves and we appreciate your feedback: support@advantagetrading.net
